Send notifications additionally to iOS & Android platforms →

Prompt Settings & Subscription Bell

Control the way visitors are prompted to subscribe. The Subscription Bell is an interactive widget your site visitors can use to manage their push notification subscription status. The Subscription Bell can be used to initially subscribe to push notifications, and to unsubscribe.

Automatically prompt new site visitors with OneSignal Slide Prompt before Native Browser Prompt (recommended) →

Enable the Subscription Bell →

Attempt to automatically prompt new site visitors with Native Browser Prompt (not recommended) →

Prompt Customization

These settings modify the HTTP Pop up Prompt and HTTPS Slide Prompt for all users. Use this to localize the Prompt to your language. All fields here are limited in the length of text they can display.

Customize the Prompt text

Site Name - HTTP Only

Example Notification Title (Desktop) - HTTP Only

Example Notification Message (Desktop) - HTTP Only

Example Notification Title (Mobile) - HTTP Only

Example Notification Message (Mobile) - HTTP Only

Example Notification Caption - HTTP Only

Welcome Notification Settings

A welcome notification is sent to new visitors after subscribing. A new visitor is someone who hasn't previously registered. If a user's browser cache is cleared, the user is considered new again.
